An exciting opportunity for a postdoctoral researcher exists in the laboratory of Dr. Andrew Feranchak at UT Southwestern Medical Center (Dallas TX, USA) to study basic mechanisms of hepatobiliary transport and liver function during health and disease. Our work focuses on understanding how membrane ion channels and signaling complexes contribute to normal bile formation and how abnormalities in these pathways lead to the initiation and progression of liver disease. These studies will identify novel therapeutic targets which will serve as the basis for new treatments for cholestatic liver disorders.

The Feranchak laboratory brings together enthusiastic scientists from diverse backgrounds and provides a resource-rich and collaborative environment. We utilize state-of-the-art techniques including cell and molecular biology, electrophysiology, patch clamp analysis, dynamic live-cell imaging, genetic engineering in mice, and mouse models of liver disease. Our work is funded by the NIH and foundation support.

We are currently seeking motivated and scientifically curious candidates with a Ph.D. or M.D. and a strong background in molecular biology, genetically engineered mouse models and related breeding strategies, cell isolation and culture, and a track record of first author publications. Previous experience with Crispr/Cas9 and cystic fibrosis mouse models is preferred. Competitive salary and benefits are offered.

**To apply:** please send a cover letter highlighting your research interests and experience, a current C.V., and a list of three references to:

Dr. Andrew Feranchak (drew.feranchak@utsouthwestern.edu)

UT Southwestern Medical Center is an Equal Opportunity and Affirmative Action Employer. Women, minorities, veterans, and individuals with disabilities are encouraged to apply.
Meetings and Conferences

APS Workshop:
Institute on Teaching and Learning
June 20-24, 2016 • Madison, Wisconsin

Physiology 2016
July 29-31, 2016 • Dublin, Ireland

APS Conference:
Inflammation, Immunity, and Cardiovascular Disease
August 24-27, 2016 • Westminster, Colorado

APS Intersociety Meeting:
The Integrative Biology of Exercise VII
November 2-4, 2016 • Phoenix, Arizona

Experimental Biology 2017
April 22-26, 2017 • Chicago, Illinois

APS Members receive discounted registration to EB and APS Conferences!
The American Physiological Society usually holds one or more specialty conferences each year. In addition, APS joins with other societies to sponsor Intersociety Meetings as interest warrants. Please send an email to meetings@the-aps.org for questions or topic suggestions on APS Conferences.

L.D. Longo  
**The Rise of Fetal and Neonatal Physiology**
- Constitutes a definitive history of an important field of physiology, that which concerns the developing fetus and newborn infant
- Addresses the contributions of basic scientists and physiologists to clinical problems of prematurity, such as the causes of premature labor, respiratory distress syndrome, retinopathy of prematurity, and thermoregulation
- Includes contributions from over 40 leading scientists in this field

J.B. West  
**Essays on the History of Respiratory Physiology**
- The book is written for scientists but is accessible to interested non-scientists
- Covers the history of significant people and events over the whole course of respiratory physiology
- Discusses how historical events such as the Renaissance and Enlightenment shaped respiratory physiology

J.A. Rall  
**Mechanism of Muscular Contraction**
- Describes the evolution of muscular contraction concepts since the discovery of sliding filaments
- Includes detailed scientific histories of principal investigators in the field
- Features information on contraction coupling and the role of calcium in contraction and relaxation

D.H. Evans  
**Marine Physiology Down East: The Story of the Mt. Desert Island Biological Laboratory**
- An exciting document for former, current and future scientists and friends of the Mount Desert Island Biological Laboratory (MDIBL)
- Provides a scientific genealogy of the MDIBL
- Combines research, administrative and social histories of the MDIBL

K.A. Hyndman  
T.L. Pannabecker  
**Sodium and Water Homeostasis: Comparative, Evolutionary and Genetic Models**
- Features current innovative topics in the field of sodium and water homeostasis
- Features domestic and international contributions from experts in the field
- Covers multiple organ systems and cellular processes

K.L. Hamilton  
D.C. Devor  
**Ion Channels and Transporters of Epithelia in Health and Disease**
- Updates readers on essential findings concerning the cell physiology, biochemistry, pathophysiology and pharmacology of epithelial ion transport
- Addresses both basic research and clinical aspects
- All chapters written by leading scientists and clinicians
